

DETECTT

GRADUATED

Inspection pointer

For subsea Inspection

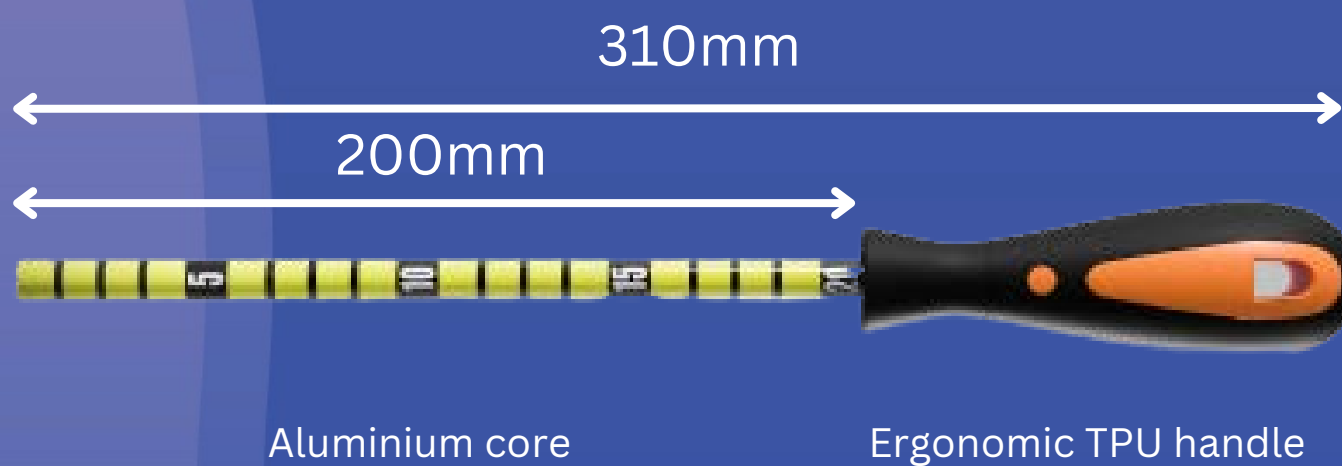

www.detectt.co.uk

Historically inspection pointers for divers have been cobbled together using welding wire and electrical tape. Whilst this method has been adopted the pointers vary in shape, colour. Size of graduation differs from one pointer to the next. Often with damaged pointers starting to unravel.

In contrast the Detectt inspection pointers have high contrast graduations. Inspections are uniform across the board. They have excellent visibility in clear measured increments with an ergonomic handle for prolonged use.
